- KNOW ABOUT FOREX?

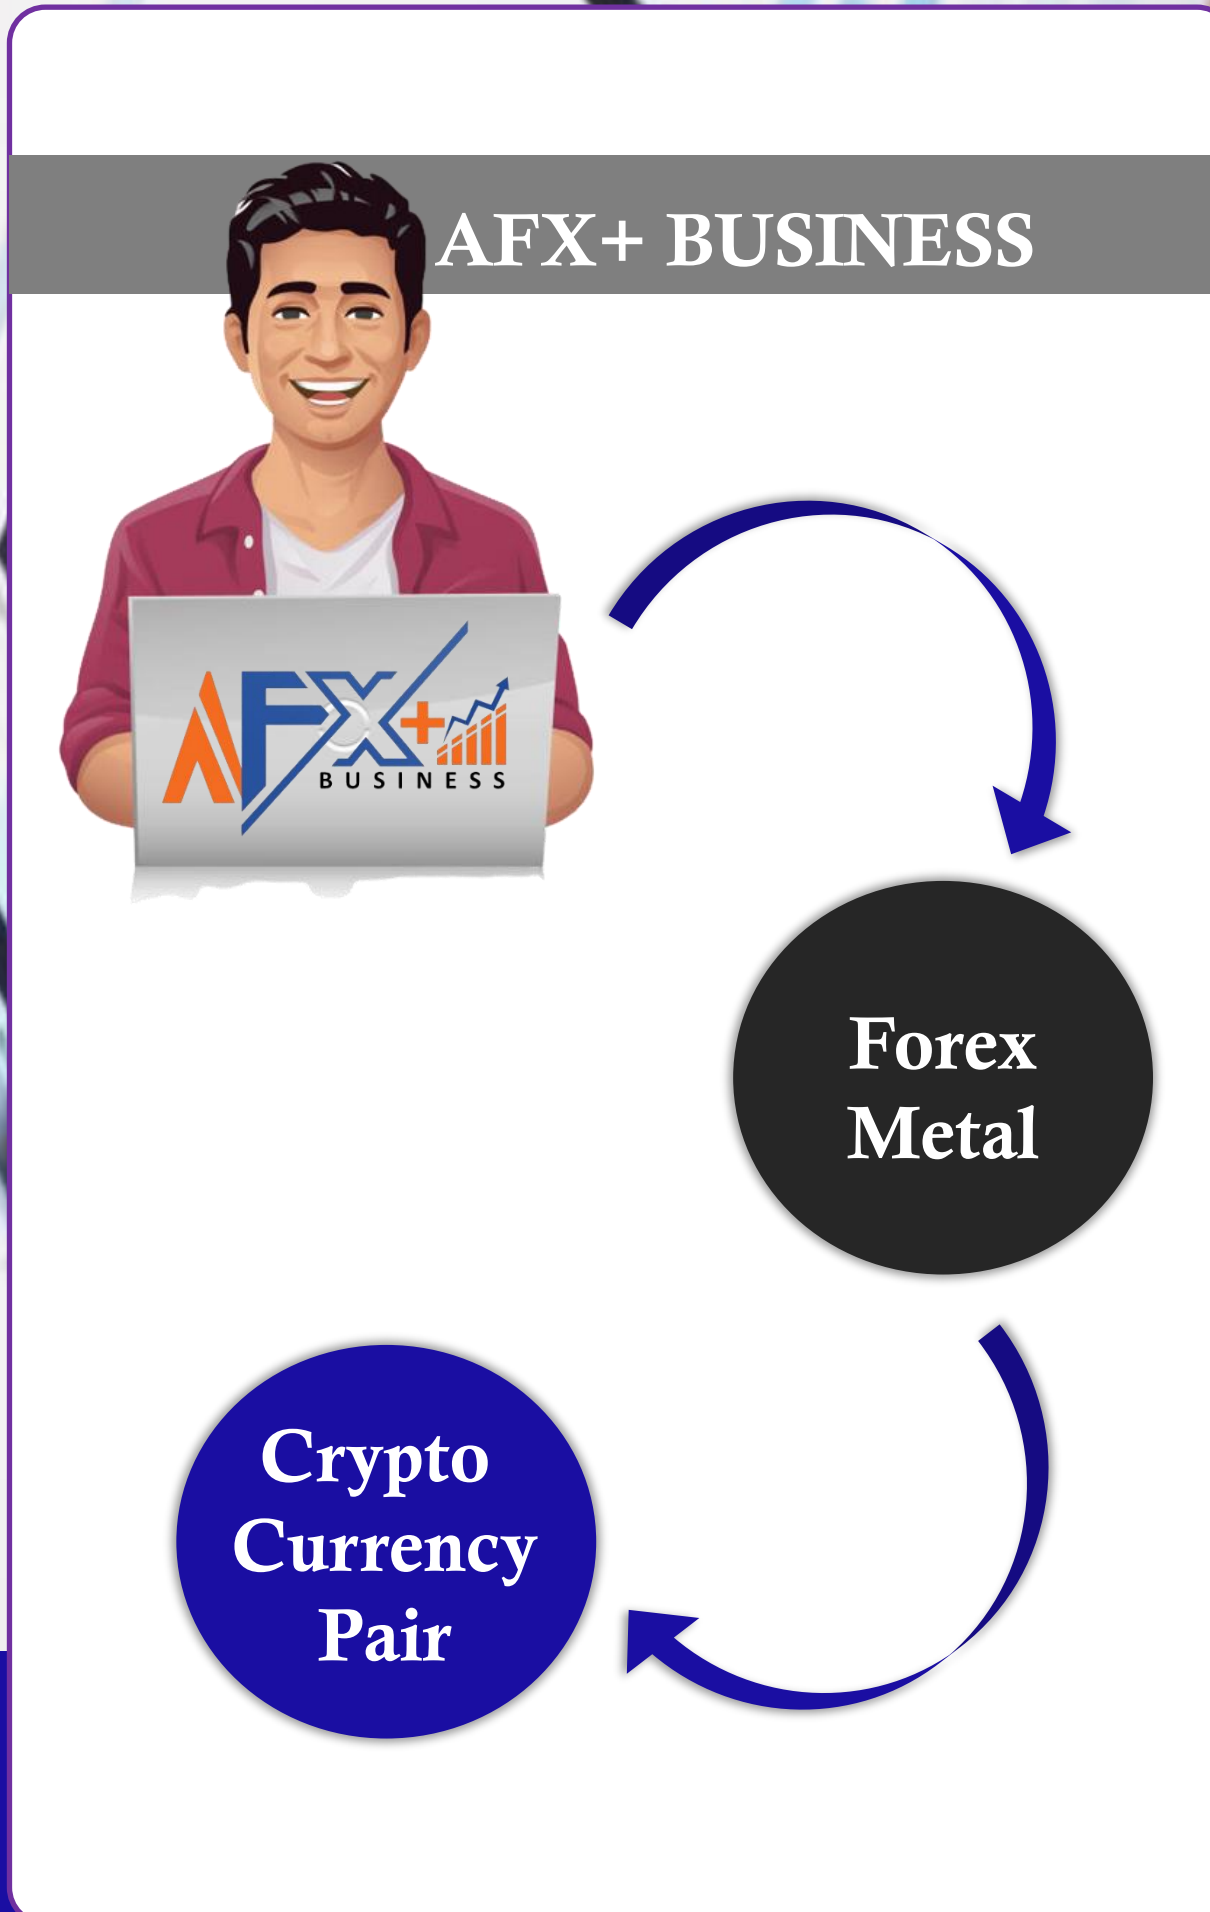

- Forex (FX) is a portmanteau of foreign currency and exchange. Foreign exchange is the process of changing one currency into another for a variety of reasons, usually for commerce, trading, or tourism.
- Trading currencies can be risky and complex. Because there are such large trade flows within the system, it is difficult for rogue traders to influence the price of a currency.
- The foreign exchange (also known as forex or FX) market is a global marketplace for exchanging national currencies.
- Because of the worldwide reach of trade, commerce, and finance, forex markets tend to be the largest and most liquid asset markets in the world.

Trading Metals Currency Pairs

- Metals are part of the mix and by metals we mean assets such as gold, silver, palladium, copper and platinum. Gold and silver are commonly traded as pairs with the euro, British pound, Japanese yen, US dollar and several other currencies.
- Metal trading means exchanging gold or silver spot prices for a major currency.
- One benefit of trading spot metals is that gold and silver unlike currencies are usually more stable during volatile times.

- Gold price is widely followed in financial markets around the world.
- Gold was the basis of economic capitalism for hundreds of years until the repeal of the Gold standard, which led to the expansion of a fiat currency system in which paper money doesn't have an implied backing with any physical form of monetization.
- AU is the code for Gold on the Periodic table of elements, and the price above is Gold quoted in US Dollars, which is the common yardstick for measuring the value of Gold across the world.
